With Nano Silver Technology

What is Nano Silver Technology?

In Nano Silver Technology Nano-sized silver particles are typically integrated into materials or filtration systems aiming to increase silver's natural antibacterial properties. Silver has long been recognized for its ability to inhibit bacterial growth and prevent microbial contamination. By reducing the surface area of silver to nano scale, its effectiveness is significantly enhanced. This technology is widely applied in water storage systems, medical devices, textiles, and coatings, ensuring improved hygiene, safety, and durability in various applications.

The new APL APOLLO Range Silver X is designed with integrated technology to ensure that its benefits reach your home, safeguarding your water and enhancing your overall experience..

Nano Silver Technology in water tanks provides a cutting-edge and effective method for maintaining clean and safe water. By leveraging its antibacterial properties, it prevents microbial contamination, enhances water quality, and minimizes maintenance needs. This innovative solution is gaining widespread popularity for ensuring safe water storage in residential and commercial sectors alike.

Available Sizes

500, 750, 1000, 1500, 2000,
3000, 5000, 7500 and 10,000 Ltrs.

Available Colors

10 YEARS WARRANTY
*T&C Apply

Key Benefits of Nano Silver Technology in Water Tanks

Antibacterial Properties

APL APOLLO- SILVER X Water Tanks with nano silver technology is recognized for its outstanding antibacterial and antimicrobial effectiveness. Silver nano particles prevent the growth of bacteria, viruses, and fungi. Silver X Water tanks With nano silver technology prevent microbial contamination, keeping stored water safe for consumption over long periods.

Long-Lasting Protection

APL APOLLO- SILVER X Water Tanks with nano silver technology delivers long-lasting protection by continuously inhibiting the growth of bacteria, viruses, and fungi. Its durable antimicrobial properties ensure water storage systems remain hygienic and safe, offering reliable defense against microbial contamination over extended periods.

Non-Toxic and Safe

APL APOLLO- SILVER X Water Tanks with nano silver technology is non-toxic and quite safe for use, ensuring effective antimicrobial protection without posing harm to human health, animals and living beings. It does not change the taste of water.

Reduced Risk of Waterborne Diseases

APL APOLLO- SILVER X Water Tanks with nano silver technology prevents the growth of harmful microorganisms and thus plays a vital role in reducing the risk of waterborne diseases caused by bacterial contamination like cholera, dysentery and typhoid etc.

Improved Water Quality

APL APOLLO- SILVER X Water Tanks with nano silver technology benefits from enhanced quality, with reduced contaminants and harmful microbes. This results in purer, safer water suitable for drinking and various household applications.

Maintenance-Free:

APL APOLLO- SILVER X Water Tanks with nano silver technology does not require any specific maintenance. It operates continuously and effectively without the need for frequent intervention or upkeep.
